15 - 17 Oct 2008 [Viet Traffic](#)

With Vietnam's booming economy, there is an urgent need for the development of good transportation networks and infrastructure to support its rapid growth. Vietnam is actively working towards building more ports, highways, railways, roads, MRT, bridges, tunnels, interchanges, overpasses, car parks and other auxiliary facilities with about US\$28 billion to be spent on road transport, and US\$33 billion to be spent on rail.

Viet Traffic 2008 is timely-organised to capture the immense opportunities available in Vietnam's traffic industry - the hub of all government organizations, as well as the centre of all major railway networks and highway links.

The 3-day exhibition will focus on 6 key segments: Highways, Railways, Streets, Government, Parking and Geographical Information System (GIS), providing an efficient networking platform for exhibitors and visitors to explore new business opportunities in Vietnam's fast-changing economic landscape.
